MDF Rose Engine Lathe 2.0

Build Instructions – Control System for Multiple Stepper Motors

Some have chosen to put the stepper motor controls in the lathe's carcass, under the bed of the lathe. However, placing all the pieces together in a separate box gives these benefits:

1. This controls box is designed be placed under the bed in the MDF Rose Engine Lathe 2.0 (as shown in the picture to the right {the bed cover is removed}).
2. This approach also allows for the controls box to be used with the original MDF Rose Engine Lathe, just placing the box somewhere near the lathe.
3. This also frees up space under the bed for:
 - a. Storage of parts or tools, or
 - b. Making a gap-bed lathe.
4. The many connections between the various pieces inside the box are already in place and the user does not have to figure out the correct alignment of connectors when building the MDF Rose Engine Lathe.

*MDF Rose Engine Lathe 2.0
(B1 and B1A removed)*

The details for how we are building the one you can buy are below. These are documented for our use to ensure consistency, and we are publishing them for anyone who wishes to build their own.

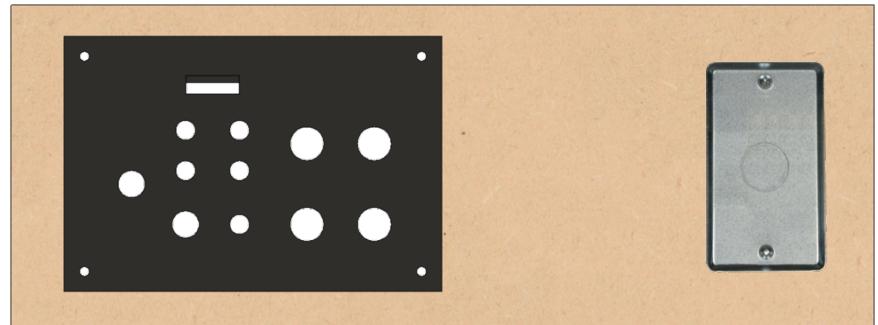

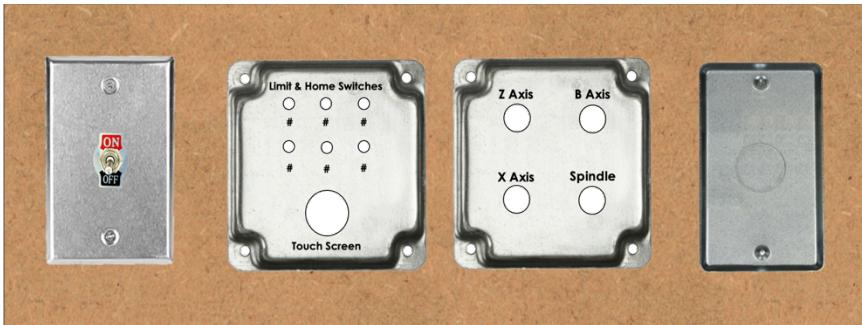

The sequence of activities follows the layout of this document. That was done consciously. Changes to the sequence should be considered strongly before making changes.

MDF Rose Engine Lathe 2.0

Build Instructions – Control System for Multiple Stepper Motors

Options for the Controls Box Enclosure

There are two options for building this box.

Option 1 – Original Design

- Uses off-the-shelf switch plates

If you choose this option, continue on page 16.

Option 2 – 3D-printed Panel

- Black panel is 3D printed.

This panel design is available on the MDF Rose Engine Lathe 2.0 Library in the book titled, 3D Printed Parts. Open the section titled, “Control System for Multiple Stepper Motors”.

Use version 2 or 3, depending on the type of limit switch jacks you are using.

If you choose this option, continue on page 16.

MDF Rose Engine Lathe 2.0

Build Instructions – Control System for Multiple Stepper Motors

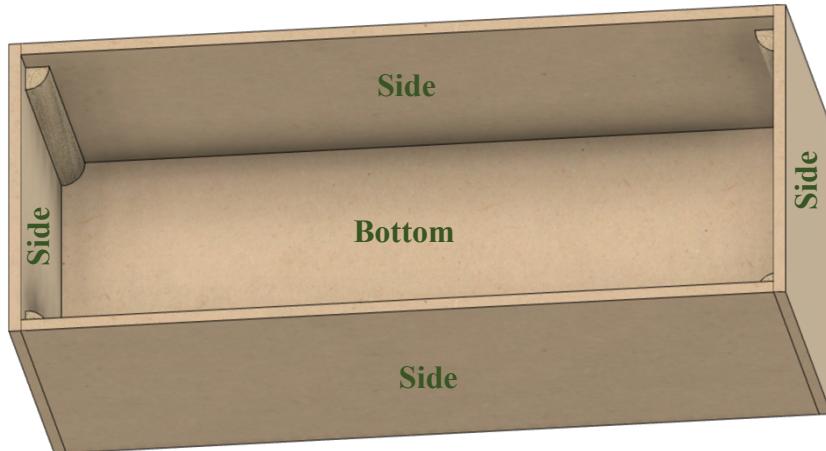

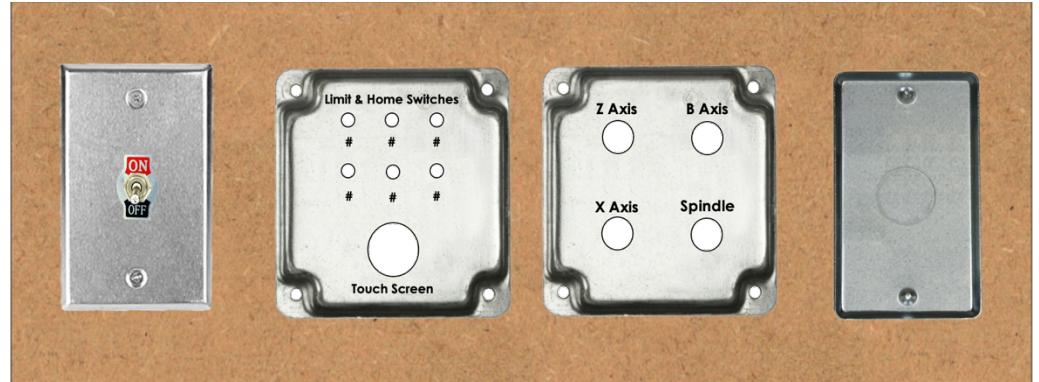

Section 1, Option 1 – Controls Box Enclosure

1. A top and bottom made from $\frac{3}{4}$ " MDF,
2. Four sides made from $\frac{1}{4}$ " MDF, and
3. 4 corner posts made from quarter-round trim (these are recommended but not required. The box can be assembled without them).

The quarter-rounds are used to give the top and bottom something to set the spacing correctly.

The four $\frac{1}{4}$ " thick sides are screwed to the $\frac{3}{4}$ " MDF used for the top and bottom.

Replacing the top, and removing the sides reveals the view to the left.

MDF Rose Engine Lathe 2.0

Build Instructions – Control System for Multiple Stepper Motors

Before Assembly

The following instructions should be followed before assembling the controls box

Bottom

This is made from 3/4" MDF.

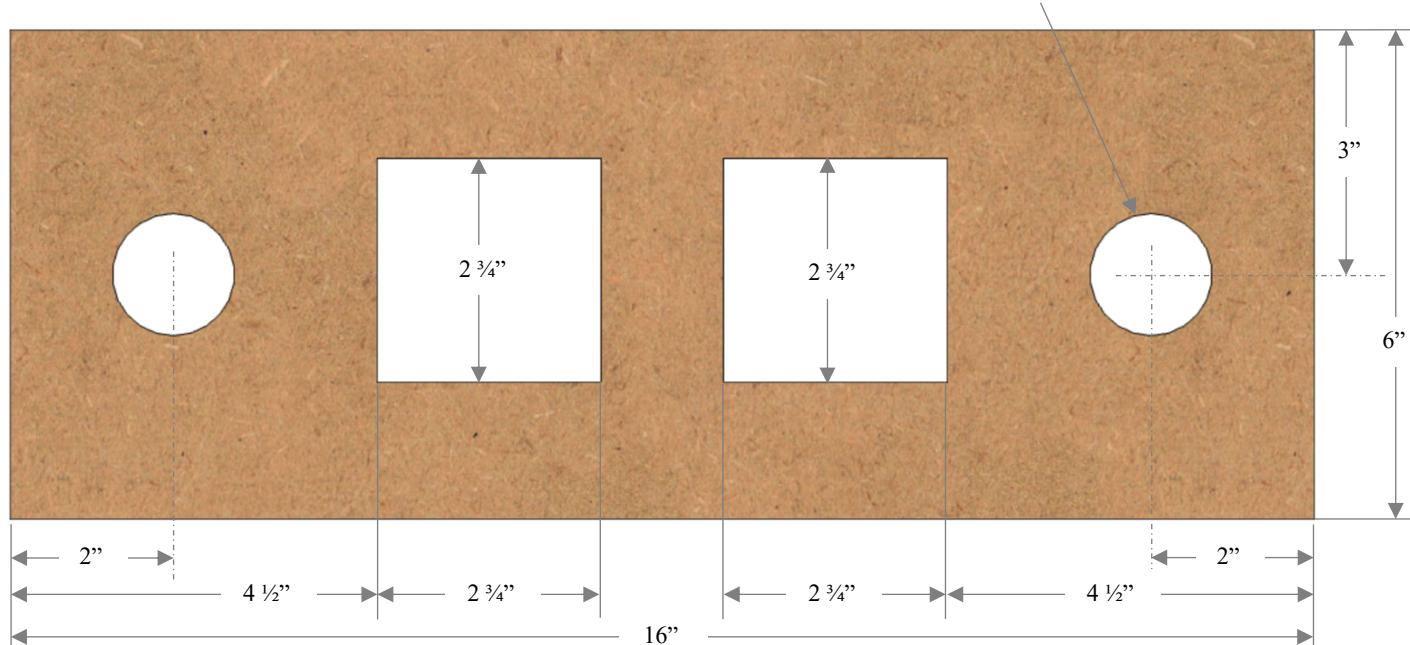

MDF Rose Engine Lathe 2.0

Build Instructions – Control System for Multiple Stepper Motors

Top

This is made from $\frac{3}{4}$ " MDF.

1 $\frac{1}{2}$ " dia (typ)

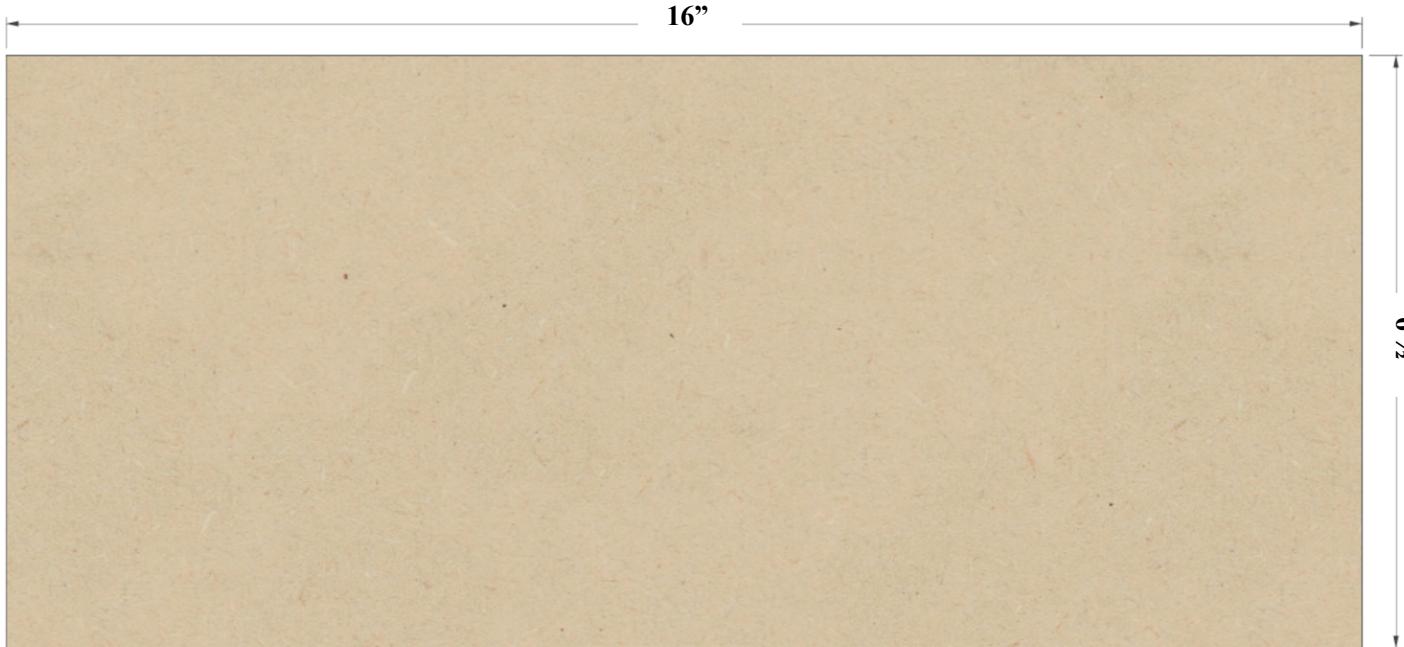

MDF Rose Engine Lathe 2.0

Build Instructions – Control System for Multiple Stepper Motors

Long Sides (2)

There are two of these, and they are made from $\frac{1}{4}$ " MDF.

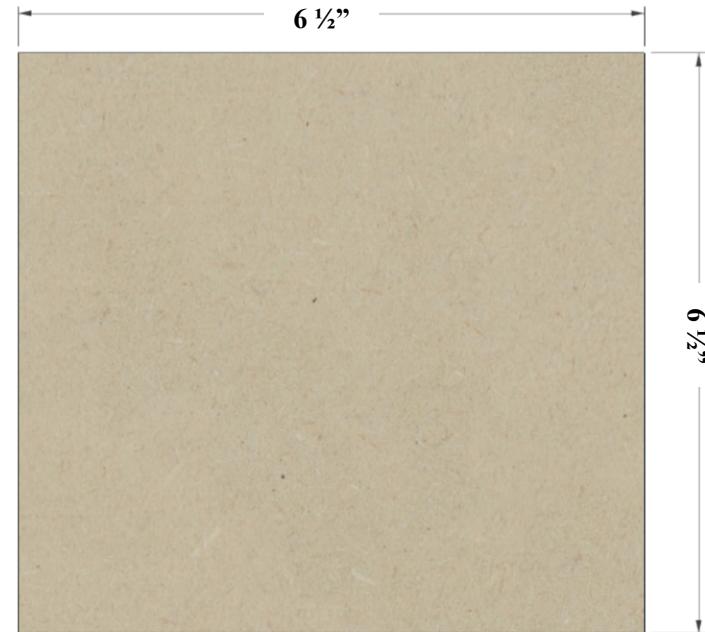

MDF Rose Engine Lathe 2.0

Build Instructions – Control System for Multiple Stepper Motors

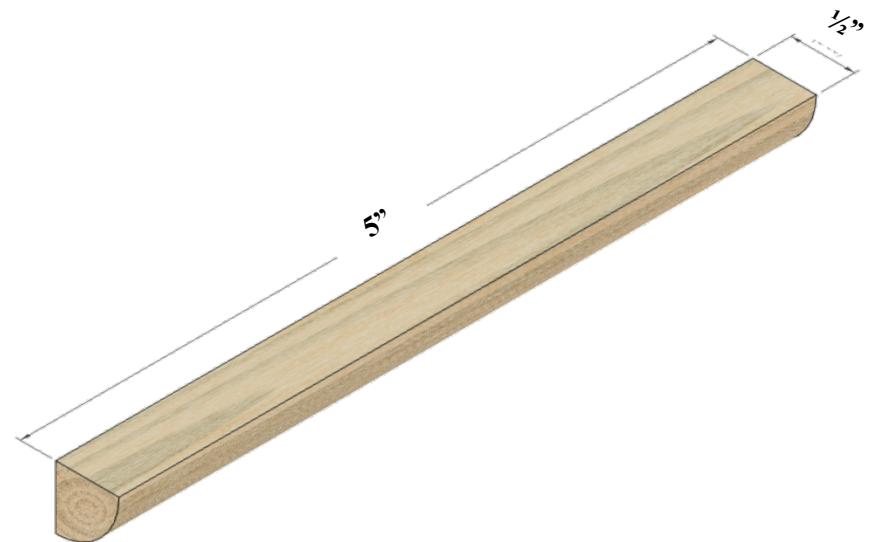

Short Sides (2)

There are two of these, and they are made from $\frac{1}{4}$ " MDF.

Quarter Rounds (4)

There are four of these, and they are made from any good trim material. These are $\frac{1}{2}$ " radius, but that is not terribly critical.

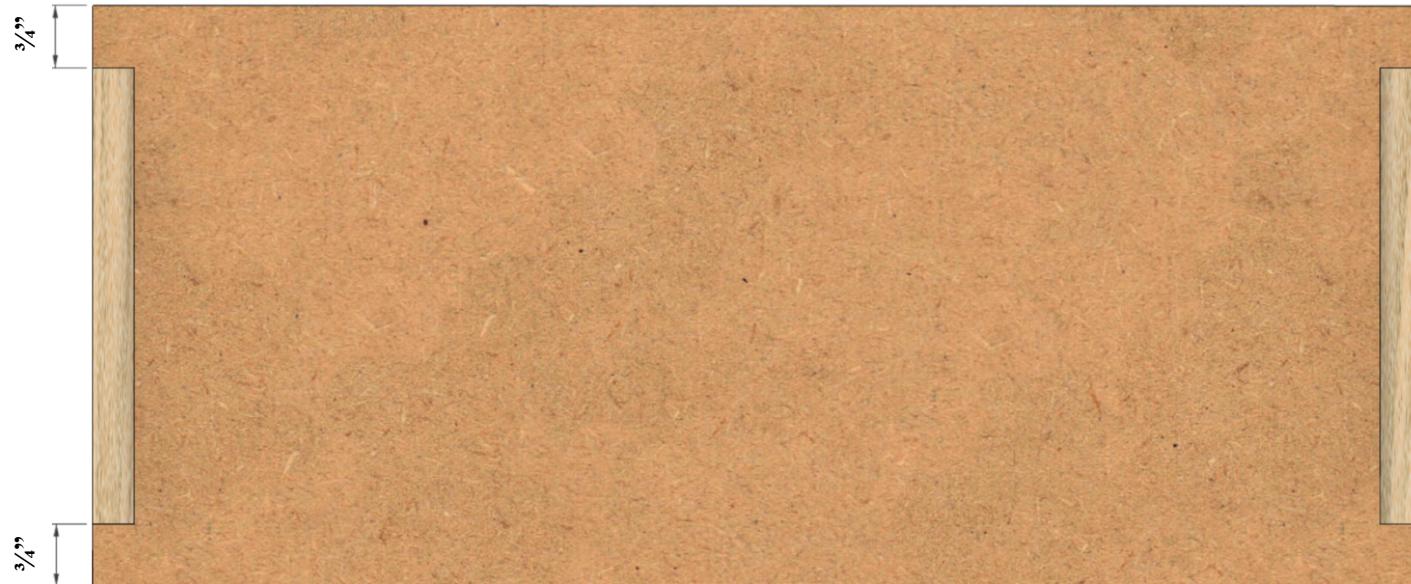

MDF Rose Engine Lathe 2.0

Build Instructions – Control System for Multiple Stepper Motors

Assembly

Glue the four quarter rounds to the ends of the two long sides. Be certain to:

1. center the quarter round so there is $\frac{3}{4}$ " on each end, and
2. ensure the edges are flush to each other.

MDF Rose Engine Lathe 2.0

Build Instructions – Control System for Multiple Stepper Motors

Electrical Plates for Connectors

Power Infeed

Use a 1-gang plate with the hole punched out for the cable strain relief. Secure the power cable in place using the 3/8 in. Twin-Screw Cable Clamp Connector. Wait until later to tighten the screws holding the power cable into place.

211

209

Power Switch

Use a 1-gang plate which is blank. Drill a 1/2" hole in the center and secure the power switch to it.

205

210

MDF Rose Engine Lathe 2.0

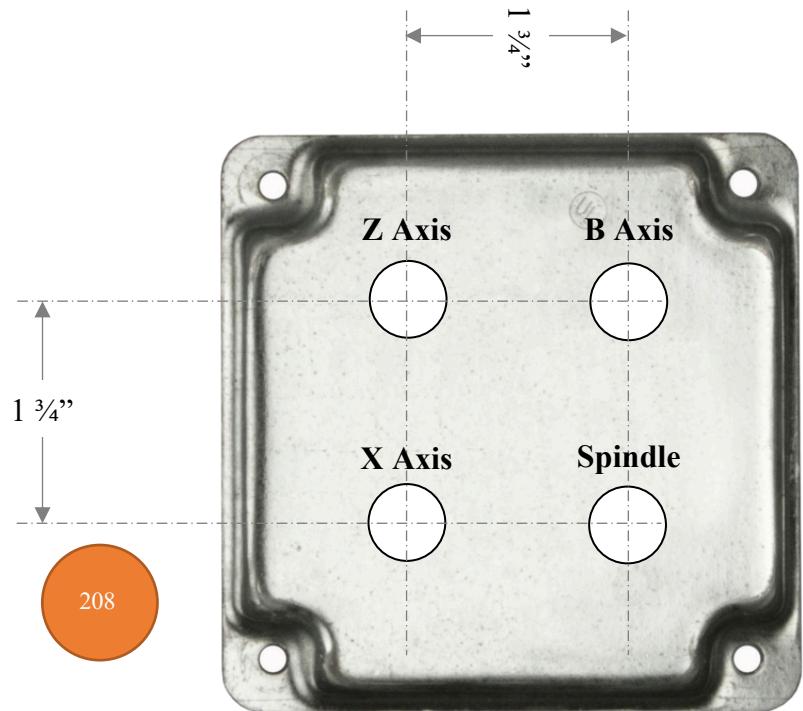

Build Instructions – Control System for Multiple Stepper Motors

Stepper Motor Jacks

Use a 2-gang plate which is blank. Drill 4 holes which are each $5/8$ " diameter.

Label these as:

- Z Axis
- B Axis
- X Axis
- Spindle

MDF Rose Engine Lathe 2.0

Build Instructions – Control System for Multiple Stepper Motors

Other Jacks

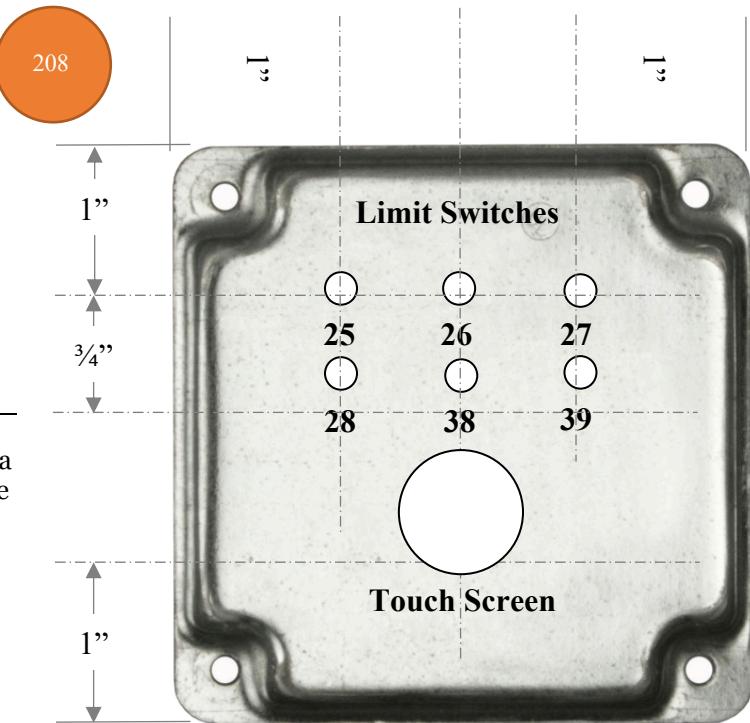

Use a 2-gang plate which is blank.

Drill 6 holes which are each 6mm or $\frac{15}{64}$ " diameter. Label these as:

Limit Switches
25 26 27
28 38 39

For the touch screen (the Nextion touch screen), the recommended approach is to use a connector like a GX-12/4 (#215) to connect the wires. For that connector, drill the hole using a 12mm bit. Center it left to right and 1" from the outer edge. Label this as:

Touch Screen

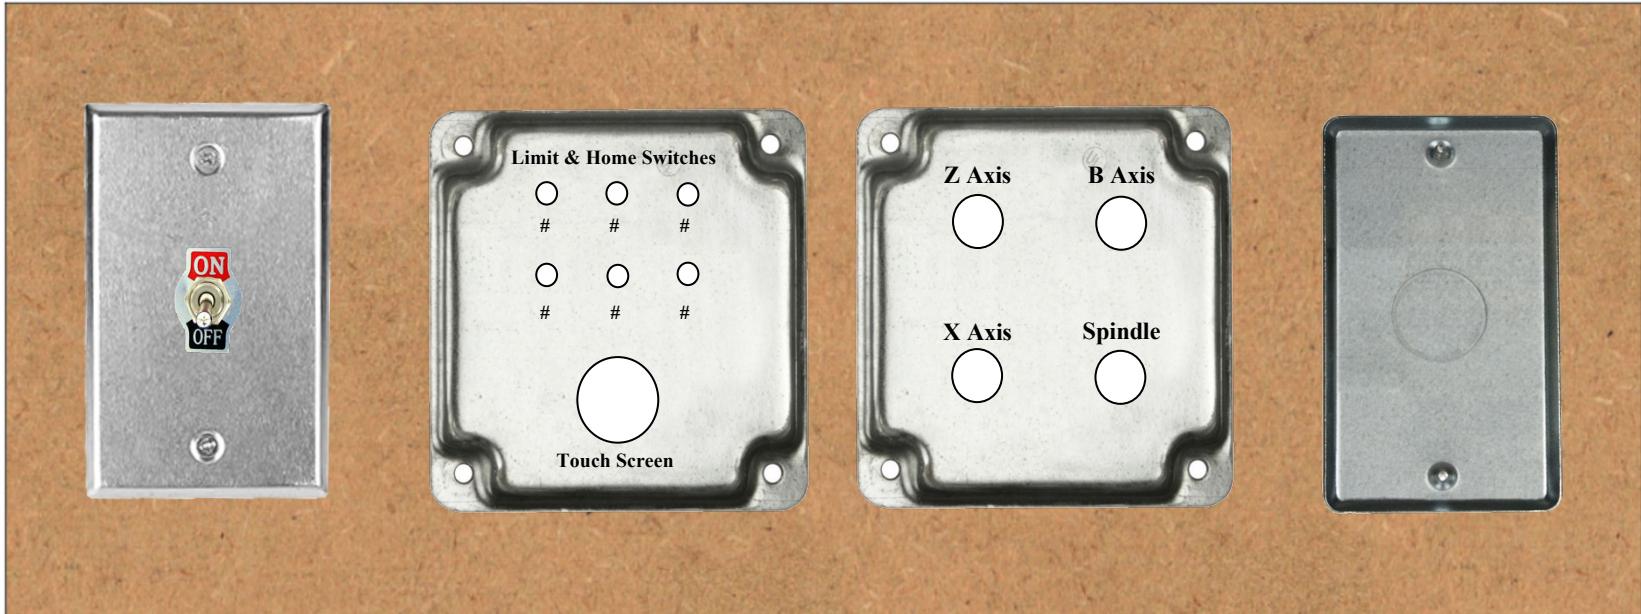

MDF Rose Engine Lathe 2.0

Build Instructions – Control System for Multiple Stepper Motors

Mounting the Covers

The layout below is recommended. This minimizes cable management issues when used.

NOTE: Screw these plates into place using 5/8" #6, flat head, particle board screws (item #408 in the bill of materials).

408

Continue on to Section 2, starting on pg. 34.

Before Assembly

The following instructions should be followed before assembling the controls box

Bottom

This is made from 3/4" MDF.

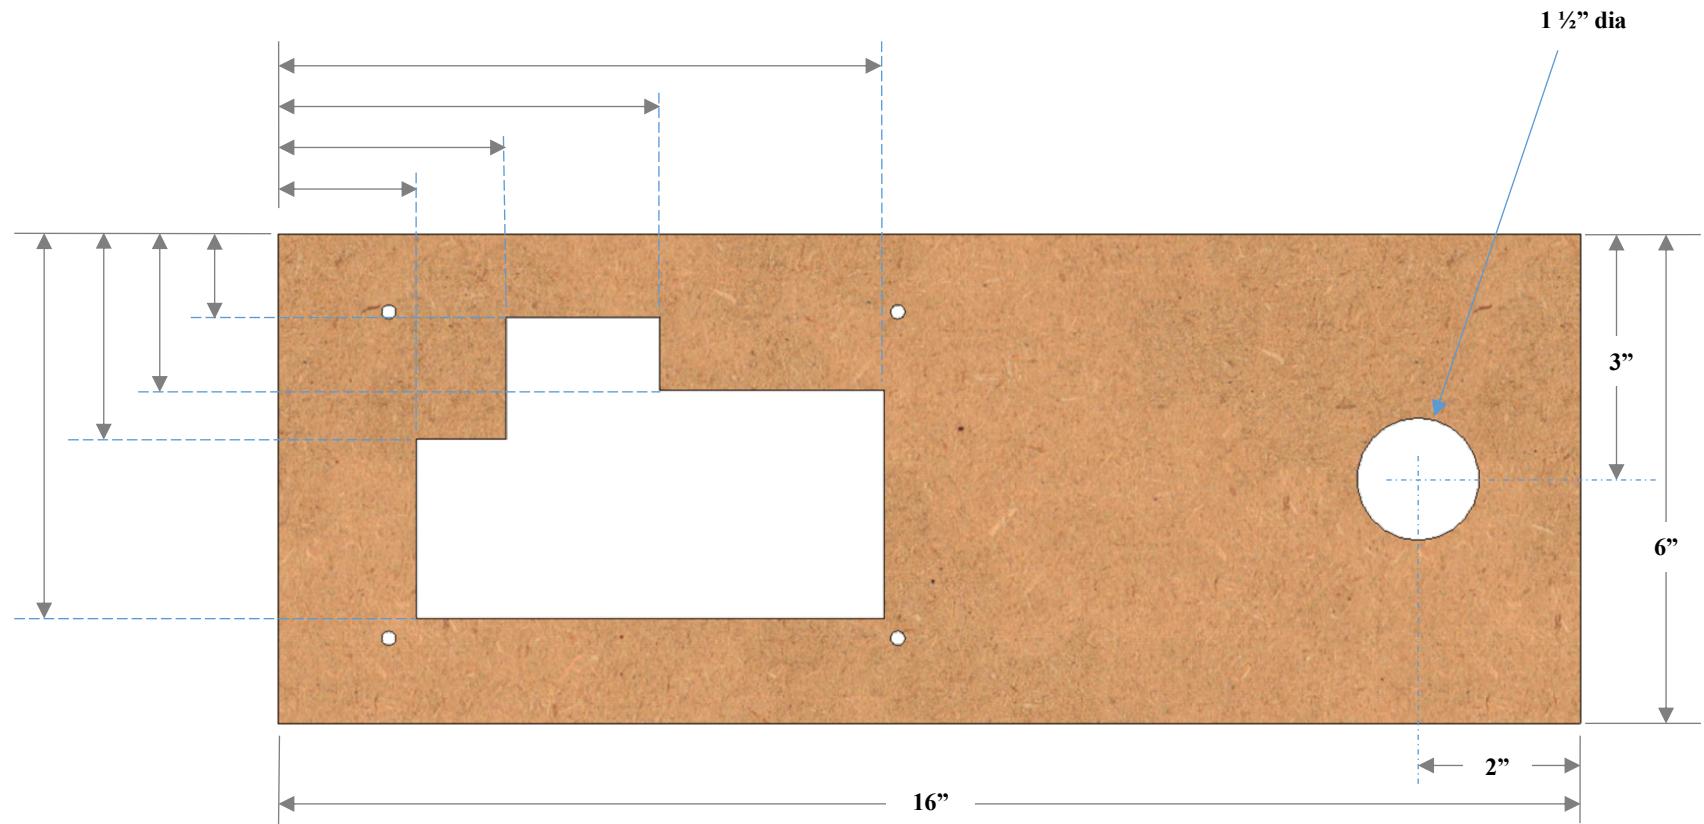

MDF Rose Engine Lathe 2.0

Build Instructions – Control System for Multiple Stepper Motors

Top

This is made from $\frac{3}{4}$ " MDF. This layout is for the version 2 or version 3 plate in the book titled, 3D Printed Parts. If you use version 1, modify the layout as necessary.

For the 3D-printed plate's mounting holes, it is best to drill them based on the plate's position after cutting the opening. Do be sure it is properly aligned before drilling the holes.

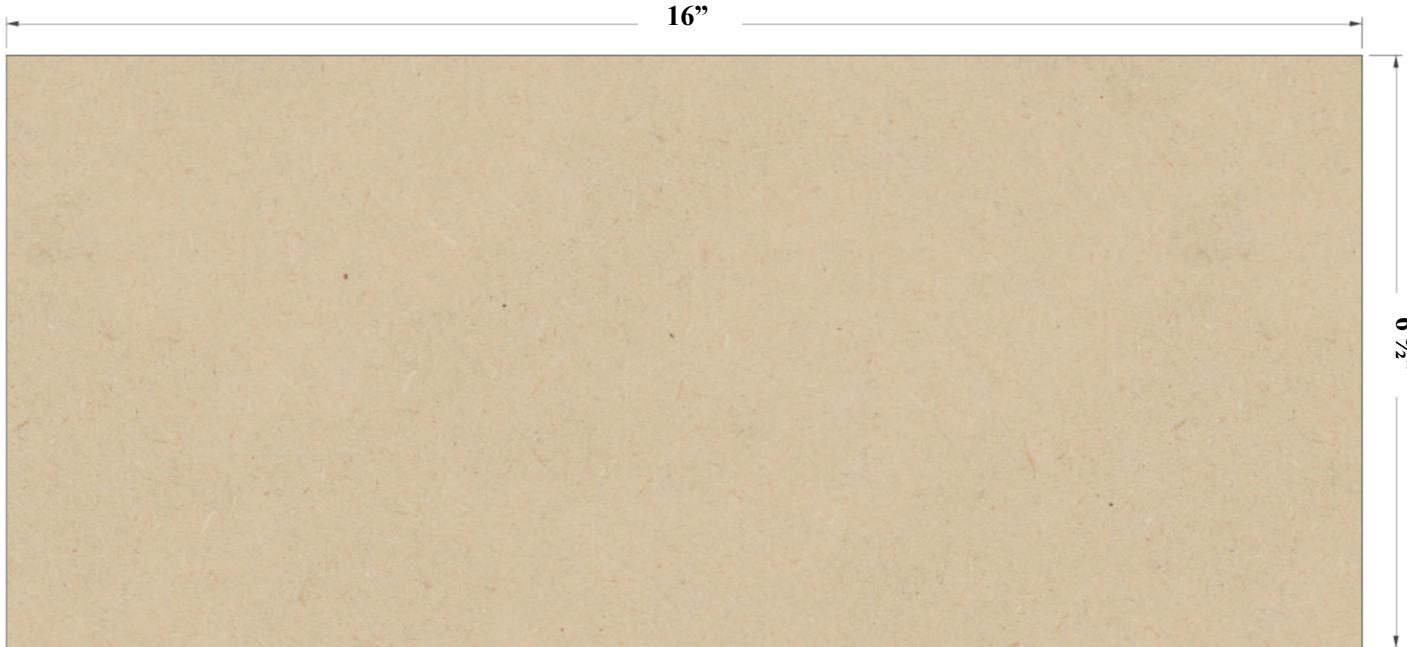

MDF Rose Engine Lathe 2.0

Build Instructions – Control System for Multiple Stepper Motors

Long Sides (2)

There are two of these, and they are made from $\frac{1}{4}$ " MDF.

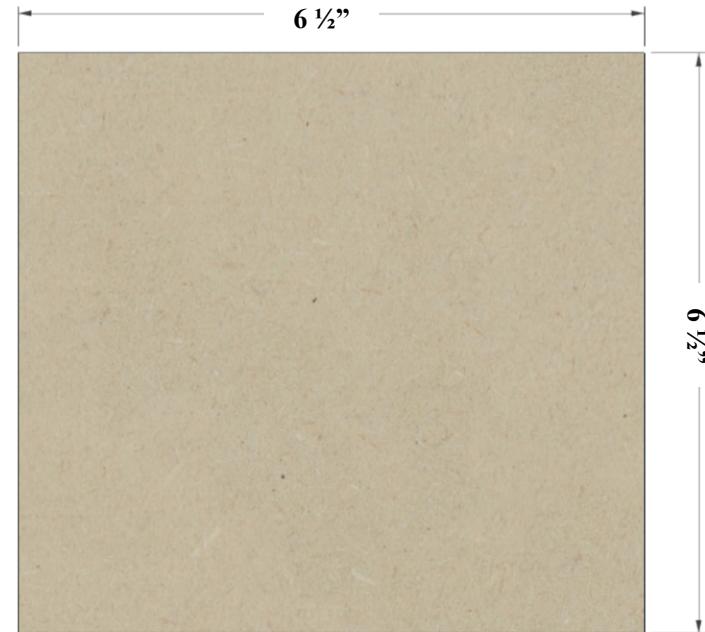

MDF Rose Engine Lathe 2.0

Build Instructions – Control System for Multiple Stepper Motors

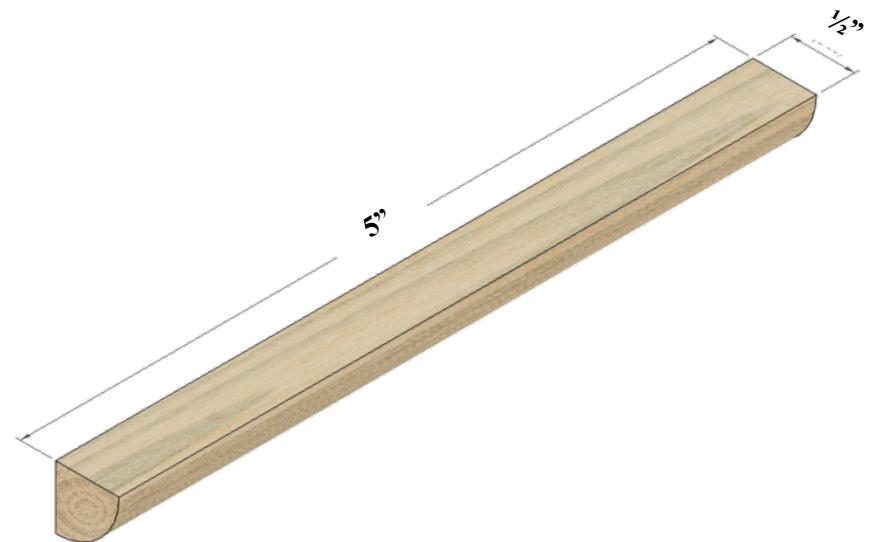

Short Sides (2)

There are two of these, and they are made from $\frac{1}{4}$ " MDF.

Quarter Rounds (4)

There are four of these, and they are made from any good trim material. These are $\frac{1}{2}$ " radius, but that is not terribly critical.

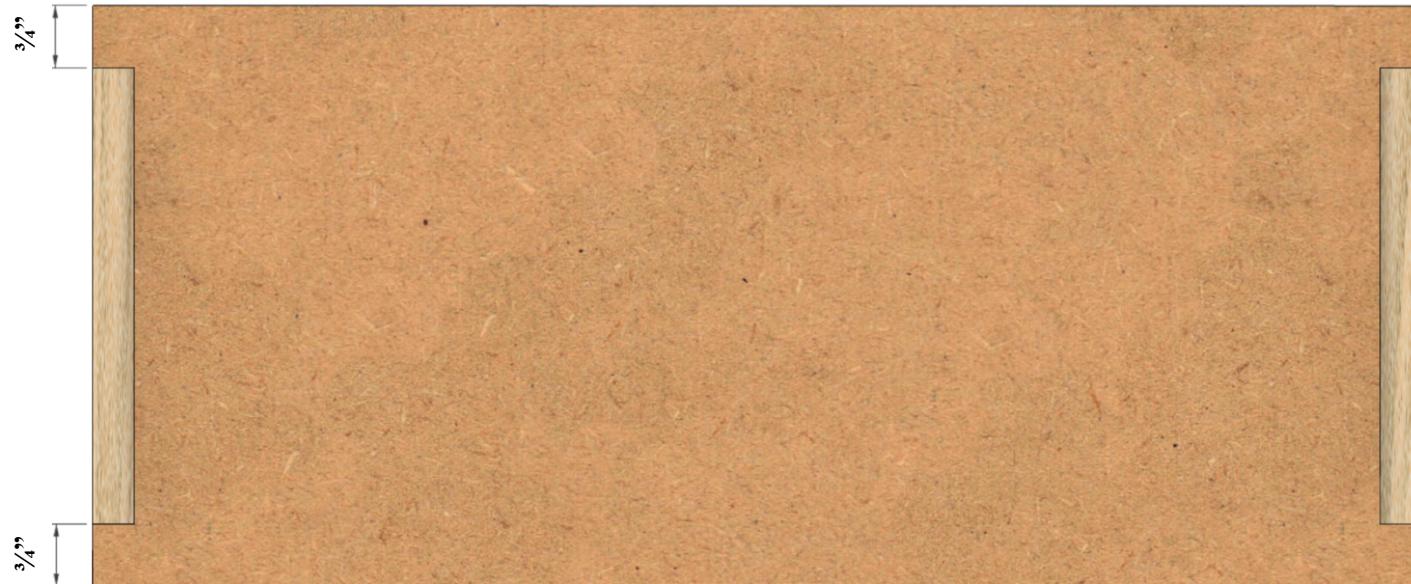

MDF Rose Engine Lathe 2.0

Build Instructions – Control System for Multiple Stepper Motors

Assembly

Glue the four quarter rounds to the ends of the two long sides. Be certain to:

3. center the quarter round so there is $\frac{3}{4}$ " on each end, and
4. ensure the edges are flush to each other.

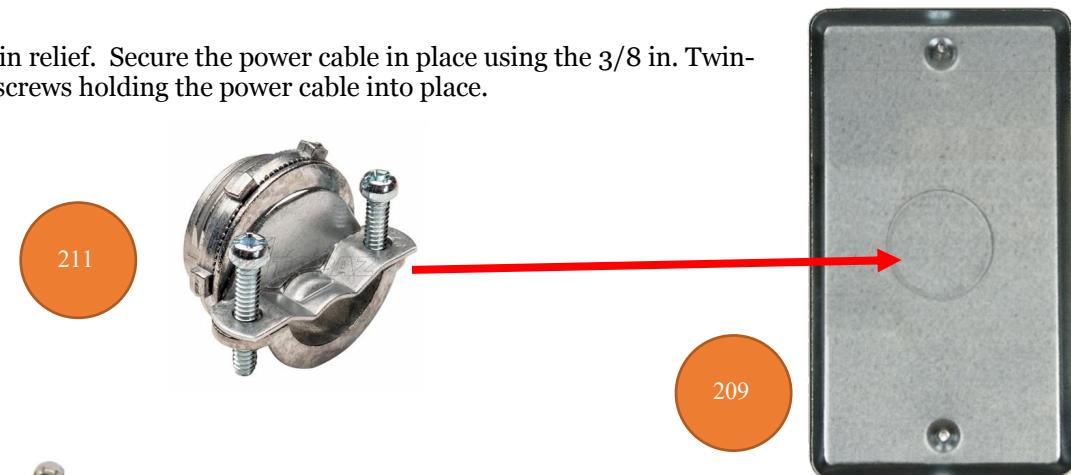

MDF Rose Engine Lathe 2.0

Plates for Connectors

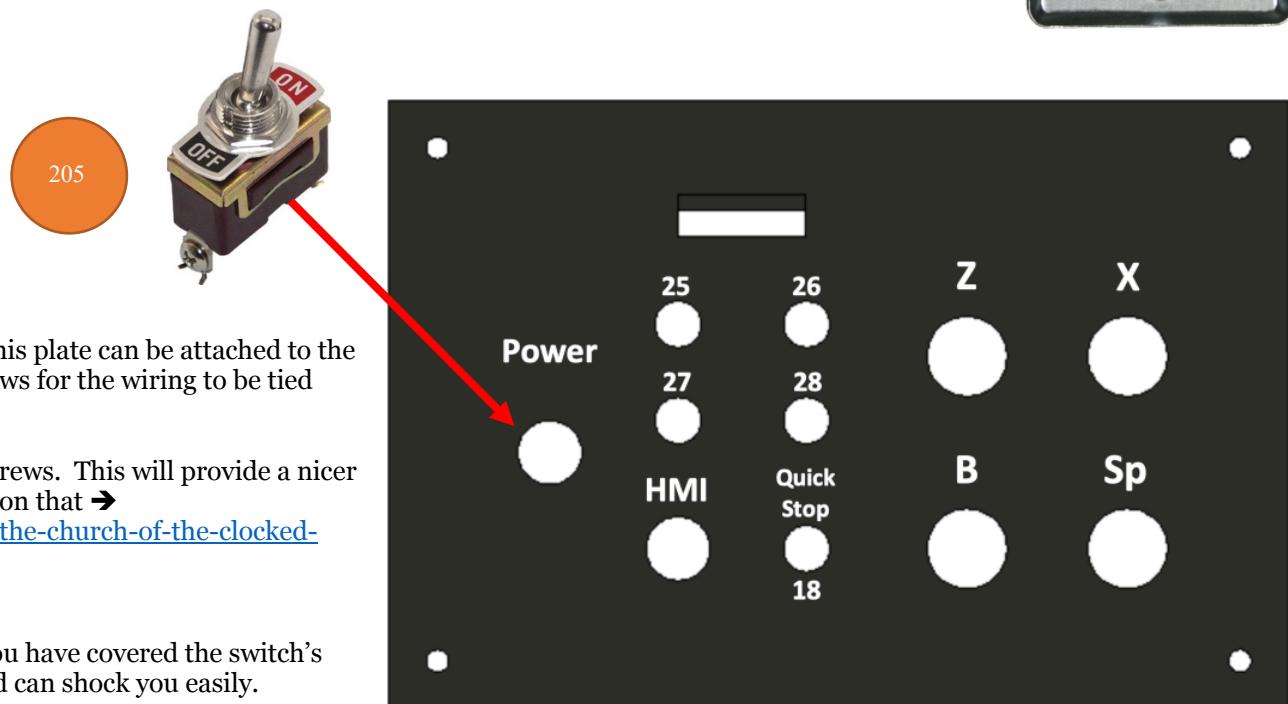

Power Infeed

Use a 1-gang plate with the hole punched out for the cable strain relief. Secure the power cable in place using the 3/8 in. Twin-Screw Cable Clamp Connector. Wait until later to tighten the screws holding the power cable into place.

Power Switch

Use the 3D-printed plate and install this switch in the position indicated.

Once the power switch has been installed, this plate can be attached to the MDF top. That is recommended as this allows for the wiring to be tied neatly down.

When attaching the plate, try to clock the screws. This will provide a nicer look. (This is a nice web site showing more on that → <https://blog.lostartpress.com/2019/04/18/the-church-of-the-clocked-screws/>)

DO NOT POWER IT ON YET. Unless you have covered the switch's terminals, they will have power on them and can shock you easily.

MDF Rose Engine Lathe 2.0

Build Instructions – Control System for Multiple Stepper Motors

Stepper Motor Jacks

Use the 3D-printed plate and install these jacks in the positions indicated.

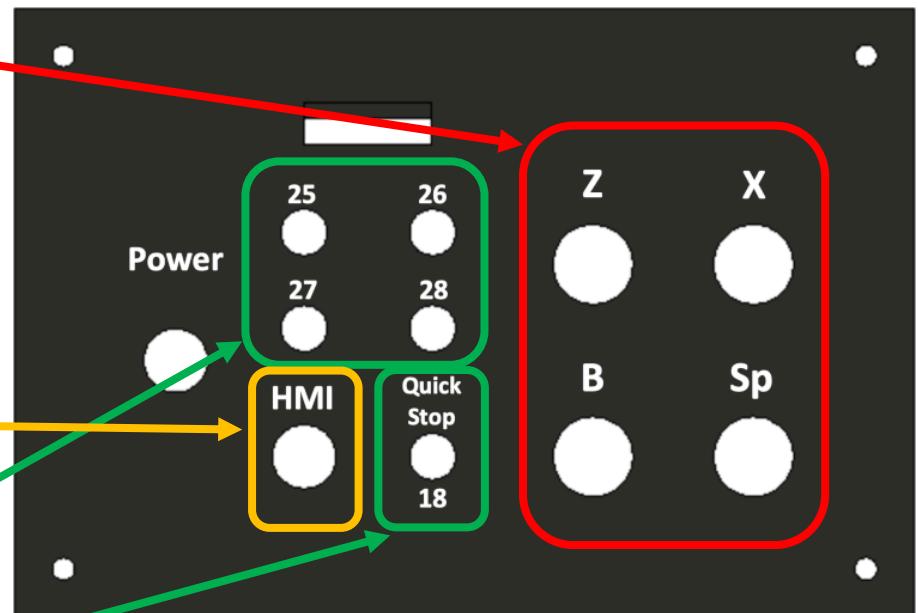

Label these as:

- Z
- X
- B
- Sp

HMI Jack

Use the 3D-printed plate and install the HMI jack in the position indicated.

Label this as "HMI".

Limit Switch Jacks

Use the 3D-printed plate and install these jacks in the positions indicated.

Label these with the Teensy Pins you are using (18 and 25-28 are shown here).

MDF Rose Engine Lathe 2.0

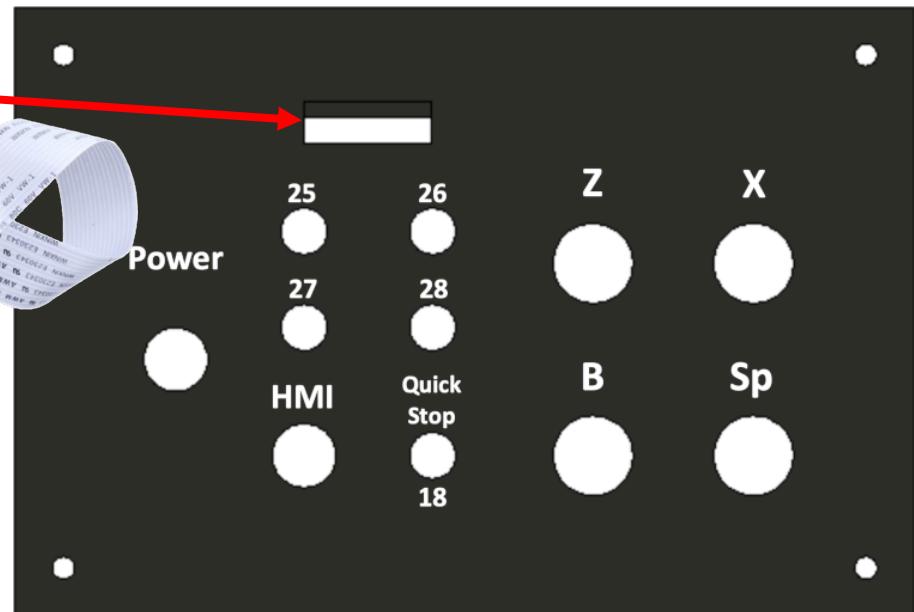

Build Instructions – Control System for Multiple Stepper Motors

microSD Extension

The microSD extension cable is installed here.

Insert this end first

And before fully seating this end, ensure the image embedded on one side is up. This is not critical, but makes it easier to insert the microSD card later as the pins will always be down.

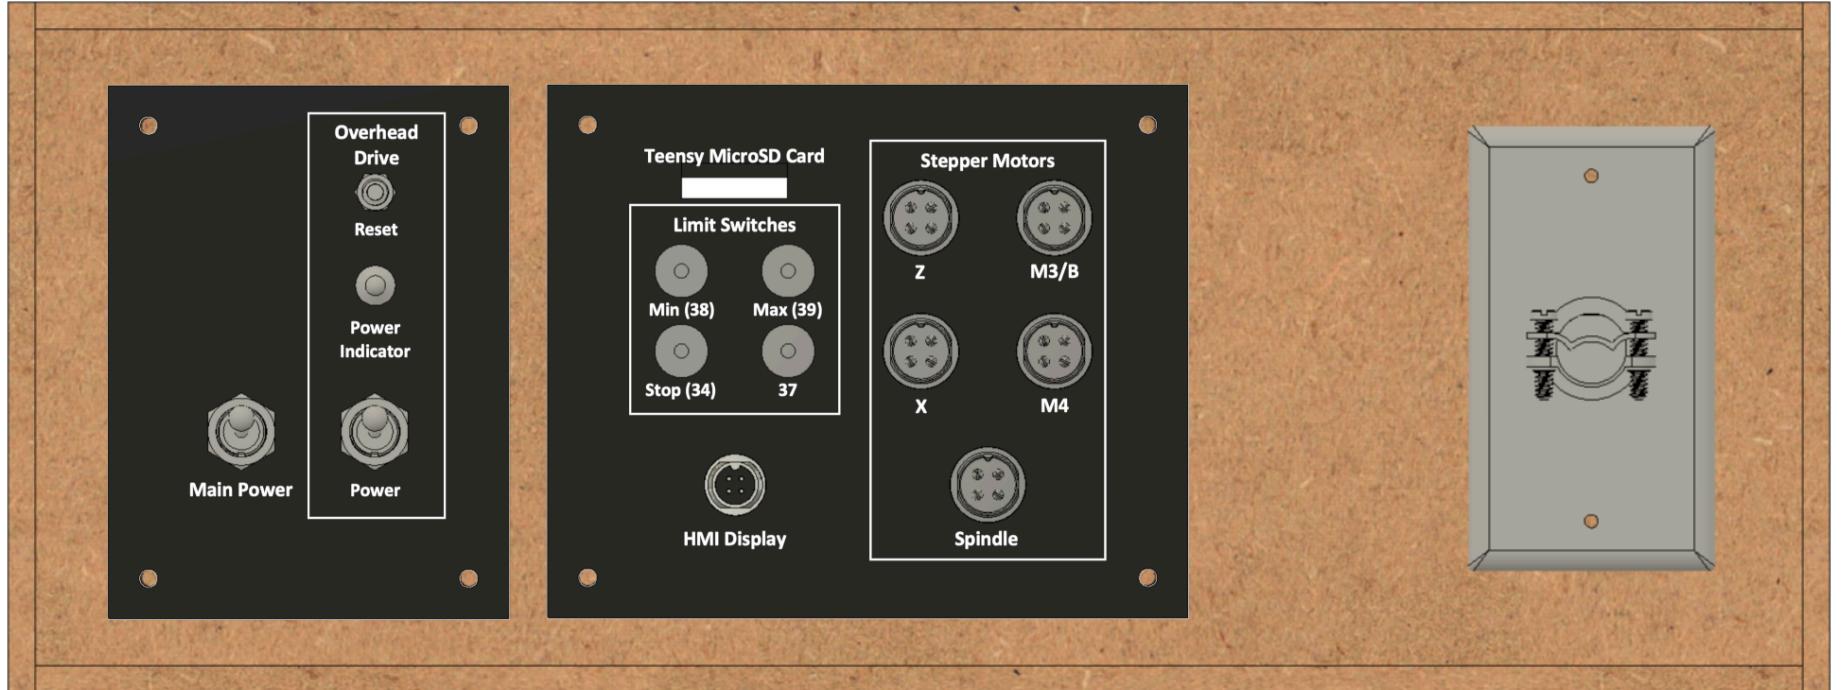

Continue on to Section 2, starting on pg. 34.

MDF Rose Engine Lathe 2.0

Build Instructions – Control System for Multiple Stepper Motors

Section 1, Option 3 – Controls Box Enclosure, v3

1. A top and bottom made from 3/4" MDF,
2. Four sides made from 1/4" MDF.

The four 1/4" thick sides are screwed to the 3/4" MDF used for the top and bottom.

Replacing the top, and removing the sides reveals the view to the left.

Section 2 – Assembly of the Control Box Electronics

Mounting Electronics to the MDF Base

Mount the electronics to the base piece of the MDF. The PCB is secured to the MDF with the $\frac{1}{4}$ " spacers under the 4 corners to place the board so that there is a $\frac{1}{4}$ " gap below.

MDF Rose Engine Lathe 2.0

Build Instructions – Control System for Multiple Stepper Motors

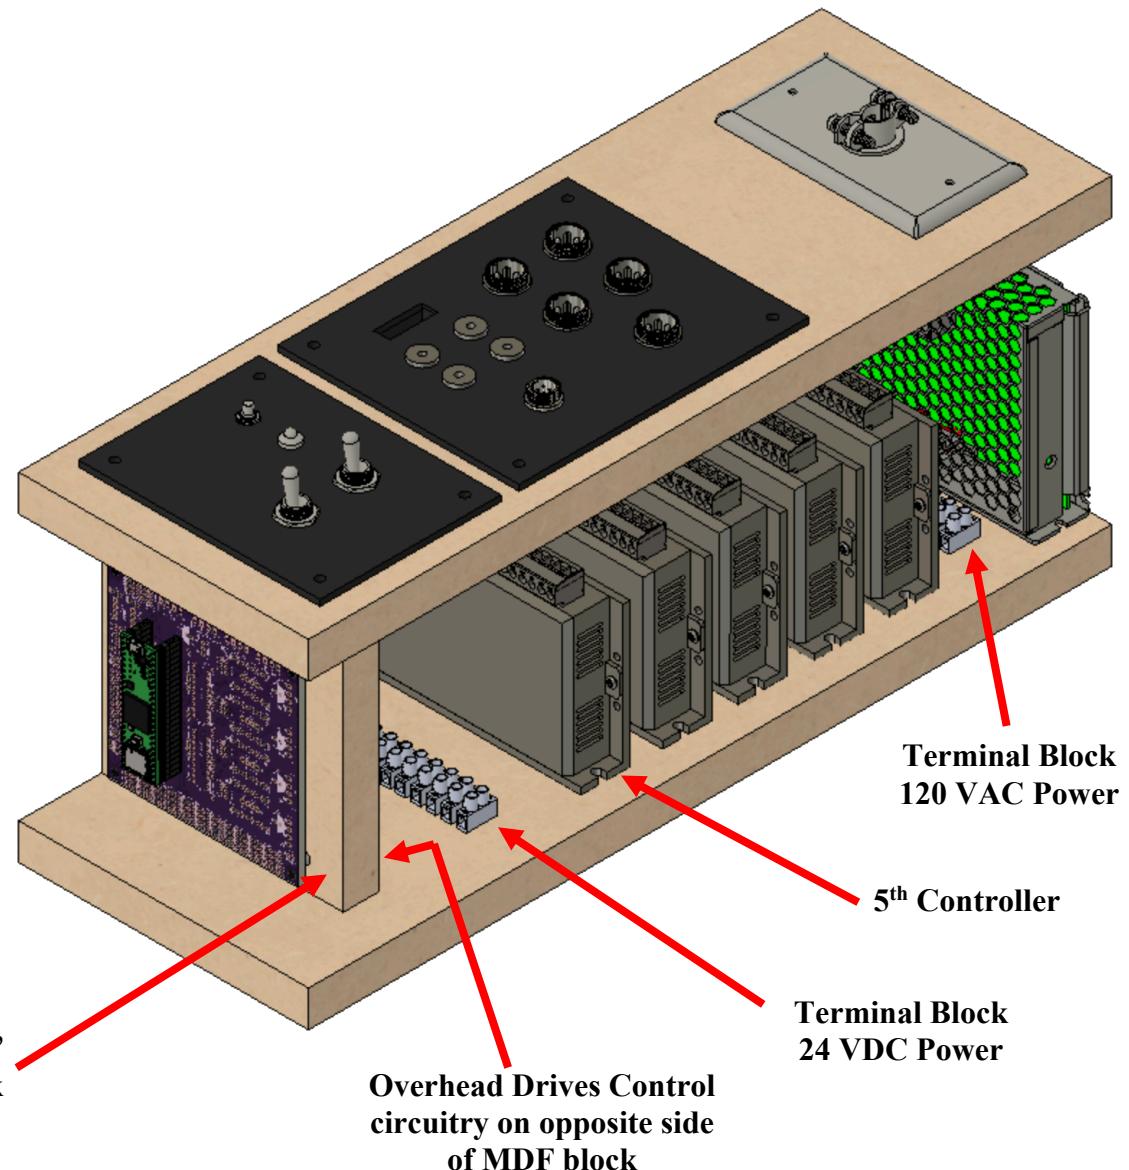

Notes Regarding the V3 Board

- When using this board, you can have up to 5 controllers (DM542Ts) connected to 5 stepper motors. To accommodate the 5th controller, space them out appropriately, but be sure to keep spacing between them to allow for heat to evacuate.

Notes Regarding the Overhead Drives Control

This option requires adding quite a bit more electronics and wiring. Thusly,

- Consider adding a piece of MDF mounted perpendicularly to the bottom board. This will provide a surface for mounting the PCB, the Arduino.
- You should also add a 2nd terminal block for the 120 VAC power distribution.
